## RESEARCH EXPERIENCE

---

- COHESIV: Contrastive Object and Hand Embedding Segmentation In Video**  
*NeurIPS 2021* Oct 2020 - Present  
*Graduate Student Research Assistant, CSE, University of Michigan* Advisor: David Fouhey
- Designed the method to generate "responsibility" maps as pseudo-labels on 3 large video datasets
  - Designed and Implemented COHESIV model architecture to predict hand and held object masks
  - Trained COHESIV models and conducted evaluation
- Understanding Human Hands in Contact at Internet Scale**  
*CVPR 2020 (Oral)* Jan 2019 - June 2020  
*Graduate Student Research Assistant, CSE, University of Michigan* Advisor: David Fouhey
- Built a large-scale YouTube video dataset (100 Days of Hands) of hands in contact with objects with learning systems consisting of 131 days of footage
  - Trained a multi-task hand-object detector with custom data and did final evaluation
  - Built a intelligent hand system that integrates full hand state prediction, a pre-trained MANO-based 3D hand mesh reconstruction model and a mesh quality classifier together
  - Implemented the model to predict hand future location at pixel-level with Dilated ResNet
  - Built the model to predict the hand grasp with only a shown object

## TEACHING EXPERIENCE

---

- AI4ALL Summer Program, University of Michigan** Jul 2020, 2021  
*Project Instructor*
- Designed teaching materials about basic image processing methods, like threading and filtering, and guided high school students to do the detection project
  - Designed virtual background vision project to use a people segmentation model to separate foreground/background and do background effects on images/live stream, and guided high school students to do virtual background project
